

Create a Climate of Prevention and Preparedness

iSecure with Lock Down Control (LDC) and Circle Of Protection (COP)

Our seamless and flexible suite of first alert and physical security controls that give you the ability to receive information and control a variety of vitally important building devices.

In the event of an emergency or dangerous situation, you will immediately control doors and gates to secure specific areas as necessary. A voice recording is initiated; logistics are automatically identified, gathered and immediately transmitted by email. This email simultaneously fulfills documentation requirements. Light and sound alarms can be activated. All of this by dialing one number on your desktop or wireless device. iSecure is security at the tip of your finger.

iSecure offers you:

- Improved response time by security officials, substantially minimizing the outcome of dangerous situations
- Immediate information organized and sent out to security, substantially reducing confusion/chaos; helping you to restore order and control

Report Agent

Incident Reports

Mid-incident and post-incident reports can be automatically generated inclusive of all logged activity.

First Alert

iAlertSecure

Provides your personnel with the capability to instantly inform security personnel of a pending concern, all by dialing one number. Information is gathered automatically, a recording is made, then the first alert is transmitted instantly to security. Security will read and listen to the same information no matter where they are.

iCallSecure

Allows your constituencies – staff, residents or visitors – to alert security officials to a situation while the details are documented simultaneously. The system may operate through Blue Light emergency phones. Response is immediate as the receiver is lifted.

iCellAlert

Provides the same instantaneous response and reporting for your constituencies as iCallSecure, through the portability of their own cell phones. Improved security communications as each person carries a link directly to the entire security force.

Physical Control

iDoorSecure

Gives your security personnel the capability to control doors in any location within your facility. Allow access or prevent access to a single door or lock down an entire building. You can isolate an unsafe situation and immediately regain control of the vicinity.

iGateSecure

Provides your personnel with the capability to remotely open or close gates. Any possible delay in sending personnel to a distant location is eliminated.

iLightSecure

Activates emergency lights throughout your facility or in targeted locations that you determine necessary. Activation can be automatically linked to the initiation of other iSecure controls.

iSoundSecure

Activates audible alarm systems throughout your facility or in targeted locations that you determine necessary. Activation can be automatically linked to the initiation of other iSecure controls.

iCellControl

Offers security officials the same control capability using their cell phone. Emergency situations are minimized by enabling security personnel with the same control capabilities that desktop and wireless phone devices of your organization.

Now includes - Elevator, Escalator and Input control capabilities

Easily utilize INPUT's to automatically prompt Egress and Notification actions

Physical Control notifications are e-mailed directly to identified trusted personel keeping everyone on the same page automatically.

Notification Agent

iNotify

Provides unsurpassed notification and alert capabilities. *iNotify* is the vehicle that can send an alert of a potential emergency *automatically* to trusted sources or a customized *controlled* message to a larger group.

iSecureResponder

Incident Commanders receive updated information from Emergency Responders and Security Personnel such as their availability, estimated time of arrival, all by using their cell or smartphone. Information is gathered automatically, a recording is made, then a notification is transmitted instantly.

Alert - Control - Notify - Report
Security at the tips of your fingers
