

## Campus Security - Blue Light and Emergency Phones

Blue Light and Emergency Phones installed on college campuses have offered a certain level of security in those areas for many years. These early systems have provided those on campus with an ability to call for assistance when necessary. We are very pleased to announce that an emerging technology now exists and is readily available to dramatically increase the level of security these systems will be able to provide in the future.

As events have unfolded from year to year, the timeliness of a response for any security implementation has been shown to be extremely critical. The need to immediately inform students, faculty and others of potential danger on campus is an essential element that must be improved upon.

A simple, seamless and effective means exists today to accomplish this goal. This product can easily be customized and contoured to the specific needs and desires of each campus. It can be applied to most existing communications networks and electronics already in place in most campus environments. Therefore, there is no need to replace existing networks with costly new ones.

This very solution is available today. We integrate the following capabilities into your Cisco Unified Communications system complimenting your existing Blue Light or other security installations.

- **First Alert Zone/Campus capabilities:**

- Visual Alerts - Blue Lights, Strobes, etc.
- Audible Alerts - Sound equipment

- **Physical Control Zone/Campus capabilities:**

- Egress control - Doors, Gates...
- Enable Remote Camera recording capability

- **SMS or E-mail notification:**

- Automatically sent to Security / Faculty / Administration offices

All of these capabilities available and seamlessly integrated into your Cisco Call Manger system. This will further improve your security abilities to inform and protect while providing significant security capability improvement for your campus.
